# Start Forms

A Start Form is the initial interface that users complete to initiate a new process, serving as a data entry point for capturing essential information before the workflow engine begins executing subsequent tasks.

Start Forms

Dyna Forms

- A DynaForm is an interactive form utilized during the process flow, where user actions influence the subsequent progression of the workflow.

- It can be assigned to an individual user, a group of users, or an entire department.

- Upon task assignment during process execution, an email notification is automatically sent to the designated user(s).

Dyna Forms

Dyna Forms

- DynaForms offer several configurable features based on specific requirements, including:

  - Email Notification

  - Recurring Notifications

  - Custom Email Notifications

  - WhatsApp Approvals

Public Forms

A Start Form can be configured as a Public Form, allowing it to be accessed by anyone with the URL without requiring login to the application. To ensure the authenticity and security of the process, authentication can be optionally enabled.

Global Forms

Global Forms are similar to DynaForms; however, they allow multiple assignees from different organizations under the same parent organization to participate and proceed with the workflow.
